MIGHTY FIRE BREAKER

Listening To
Nature's Cry

**Mighty Fire Breaker's MFB-34-CitroTech®
is the Safest and Best Interior Raw Lumber Fire Defense in America.**

Mighty Fire Breaker's MFB-34-CitroTech® is our Founder's new and advanced version of an aqueous-based fire inhibitor he developed in the past. Its efficacy as a fire inhibitor for lumber has been proven by ASTM E-84 testing, and it does not need to be pressure-impregnated to provide effective fire protection. It can, and has reduced insurance premiums for builders when 100% of the interior lumber has been sprayed before drywall is installed. Our Founder's fire inhibitor substance and program has already defended over 20 million square feet of living space on high density housing throughout the U.S.

MFB-34-CitroTech® has received the U.S. EPA Safer Choice designation, the UL GreenGuard Gold and LENS certification and it contains zero VOCs. This means that it is safer to apply than latex paint, and that during application the job site is not shut down.

It's now time for us to make MFB-34-CitroTech® available to all contractors, factory-built manufacturers and providers of other wood-framed structures. Whether in a factory or on a job site, all that is required is an airless sprayer with a two foot extension to spray and wet all the interior wood with MFB-34-CitroTech®. When using on exterior fences, decks and patio covers, make sure that it's sprayed over the next day with solid body stain or paint to protect it from both UV rays and moisture.
