US Hwy 14

CO Hwy 14

Every MFB Proactive Wildfire Defense Mapper comes equipped with a state-of-the-art GPS chip for tracking the activity which has taken place, and with an accuracy of 3-5 meters. This means knowing and logging the location of firebreaks which have been sprayed. The result is a precision, documented map of all areas which have been sprayed from either backpack sprayers or cannons towed by trucks.

Our goal is to make spraying and tracking easy, and without the use of any dye marker. This type of proactive, spraying activity fights wildfires before they arrive, and it does so while saving thousands of gallons of water.

Our programs will advance wildfire defense in an affordable way so that all property owners and fire departments can fight fire more safely, and can do so with MFB-31 Citrotech® the best, safest and all-natural early fire elimination chemistry on the planet.
